PLASTIC JUMBO BINS, WHEELIE BINS AND CRATES

Mpact Plastic Containers, a subsidiary of Mpact, has operations in Atlantis and Brits and is a leading supplier of plastic containers in the South African market, specialising in Returnable Transit Packaging (RTP). These multi-trip durable containers are moulded from polypropylene and high density polyethylene.

The award-winning nestable pallet has an additional perimeter base that can be clipped in, to provide additional strength. Its FDA-approved polyethylene outer skin is impervious to liquids and is easy to clean, making the pallet a hygienic, bacteria-free way to transport products.

We also offer a wide range of value-added plastic containers to suit applications in the agriculture, automotive, baking, food processing, manufacturing, logistics, pharmaceutical, poultry, retail, waste collection and wine industries.

The 5500-tonne Engel injection moulding machine in the Western Cape is the largest of its kind in the southern hemisphere and is primarily used for the manufacture of the jumbo bin. This 38kg bin is used primarily for the bulk transport of fruit, and is used extensively in the agricultural industry for harvesting and storage of fruit. The jumbo bin is also used by general industry for the efficient storage of components and raw materials.

plastic containers

Mpact Plastic Containers also produces the wheelie refuse bin, making it the third biggest South African manufacturer of these large volume bins. Besides that, we produce a range of other crates, trays and related packaging items.

In addition we create specific solutions and systems for our customers. Many companies within the supply chain and logistics industries now benefit from the long-term advantages of plastic containers over disposable packaging.
